DIGITIZE WITH EASE

RAPID DIGITIZATION TRAINING

by Nextwit

What is this?

Four-day long **training with Nextwit digitization and data experts** to learn how to create a business app with Microsoft PowerApps

Deliver in a **low-code tool**, which is one of most recent tech trend

Know **how to create an application within a few hours** from scratch and connect to various data sources

Practice the **supporting skills**: design end-to-end solutions and the data structure behind an application

Why is it relevant?

Most of the companies struggle to provide **internal solutions which are easy to use** and customizable

With low-code tools the solution is closer than ever. **Without deep development knowledge** you can create an application within hours.

Companies can easily **replace their messy Excel files, scary ERP frontend**

Digital transformation programs start day-by-day. We show you how to **digitize with ease**!

Who should attend?

Mike, Business Analyst
I work with data day-by-day!
But it's hard to work together with my colleagues in an Excel file!

Frank, Maintenance Manager
We have enormous responsibility to check the status of machines! Using checklists in Excel files are so outdated!

Kate, IT demand manager
I'm fed up with rapidly changing business specifications written in Word. Why not work closer together?

At Nextwit, we believe that there is the **right technology for everyday people** to digitize their companies by **themselves!**
